Summary	127

VITAL STATISTICS BRANCH

(DONALD MACKIE, *Deputy Registrar General*)

The outstanding features revealed by the Vital Statistics for the Province of Alberta for the year 1937 show birth and death rates exactly the same as that of the previous year, whilst there is a substantial increase in the marriage rate.

Since the year 1931 the birth rate has been steadily declining, each year constituting a new low record in the history of the Province; the same also applies to Canada as a whole. This year however, the decline has been arrested in Alberta, but not in the Dominion, and although a little comfort may be derived from the Alberta rate, there is little cause for optimism until a general improvement manifests itself in Canada as a whole.

The trend of the Alberta marriage rate is exactly opposite to that of the birth rate. There has been a steady increase annually from the year 1931 to the present year. This also is true of the Dominion rates as a whole.

The death rate from epidemic and contagious diseases is considerably higher than the previous year, and is mainly attributable to the substantial increase in the number of deaths from influenza and measles. There has also been an increase in the number of deaths from poliomyelitis, whilst the rates from scarlet fever and diphtheria have remained stationary. The diseases in this class which register a decline are typhoid fever, whooping cough and pulmonary tuberculosis. It is gratifying to observe that the cancer death rate is lower than the preceding year. This is twice in the last four years that the steady annual increase in this disease has been arrested. Heart disease as usual occupies first place and shows a steady increase, cancer being second and pneumonia third. The number of deaths from violence is less than the previous year, being attributable to the decline in motor car and drowning accidents.

The population of the Province of Alberta for the year 1937 has been estimated at 778,000. All rates in this report have therefore been based on that figure.

BIRTHS

The number of living children born and registered during the year amounted to 15,903, constituting a birth rate of 20.4 per 1,000 population. This is 117 more than the number for the previous year, but is the same rate. Comprising the 15,903 births were 8,027 males and 7,876 females, a ratio of 1,019 males to 1,000 females. This rate is 32 males less than the average for the preceding ten years, and is the lowest record in the history of the Province. There were 410 twins (205 sets) born during the year and 3 triplets (1 set). Illegitimate births numbered 626, and is 19 more than the number for the preceding year, constituting a rate of 3.9 per 100 births.

Of the total births registered, 7,689 occurred in cities and towns of over 1,000 population, 7,332 in the rural districts, and 882 on

Indian reservations. In the four large cities, the births were as follows: Edmonton 2,606, Calgary 1,638, Lethbridge 590, and Medicine Hat 333.

For purposes of comparison, the following are the birth rates for Canada, the Provinces, Great Britain and certain other countries of the world for the year 1937. The greater portion of these rates, as also international rates published in this report, have been taken from the Annual Report of the Registrar General for Scotland.

BIRTH RATES

Canada	19.8	Hungary	19.8
Prince Edward Island	22.4	Netherlands	19.8
Nova Scotia	21.3	Irish Free State	19.2
New Brunswick	24.0	Germany	18.8
Quebec	24.1	Scotland	17.6
Ontario	16.6	New Zealand	17.3
Manitoba	18.0	Czecho Slovakia	17.2
Saskatchewan	19.8	U.S.A.	16.7
ALBERTA	20.4	Norway	15.3
British Columbia	15.0	Switzerland	14.9
Poland	24.9	England and Wales	14.9
Italy	22.7	Sweden	14.3
Northern Ireland	19.8	Austria	12.8

MARRIAGES

There were 6,345 marriages registered during the year. This number is 325 more than that of the previous year, and is 640 more than the average of the five preceding years, and is the largest number of marriages recorded since the inception of the Province. The marriage rate for the year is 8.2 per 1,000 population.

Of the 6,345 marriages, 159 are brides of 16 years of age and under, 1,318 are between the ages of 17 and 19, and 2,970 between the ages of 20 and 24. There were 76 grooms and 30 brides over 60 years of age, 21 of these grooms and 6 of the brides being over 70 years of age. The number of marriages in the four large cities are as follows: Edmonton 1,469, Calgary 1,174, Lethbridge 244, and Medicine Hat 173.

For purposes of comparison, the following are the marriage rates per 1,000 population for Canada, the Provinces, Great Britain and certain other countries of the world for the year 1937:

MARRIAGE RATES

Canada	7.9	England and Wales	8.7
Prince Edward Island	6.3	Sweden	8.7
Nova Scotia	8.0	Italy	8.6
New Brunswick	8.3	Czecho Slovakia	8.3
Quebec	7.9	Norway	8.2
Ontario	8.1	Poland	8.0
Manitoba	8.5	Scotland	7.7
Saskatchewan	6.2	Netherlands	7.7
ALBERTA	8.2	Switzerland	7.2
British Columbia	8.2	Austria	6.9
New Zealand	9.5	Northern Ireland	6.6
Germany	9.1	Irish Free State	5.1
Hungary	8.8		

DIVORCES

There were 241 divorces granted by decree absolute during the year, which is 32 more than the number for the previous year, and 67 more than the average of the preceding five years; 102 were granted to husbands and 139 to wives. In addition to the divorces, 5 decrees of nullity were issued.

DEATHS

The deaths of 6,261 persons (including Indians) were registered during the year, of whom 3,661 were males and 2,600 were females.

This number is 114 more than in the previous year, and constitutes a death rate of 8.0, which is the same as the previous year. There were 320 males and 279 females 80 years of age or over at the time of death, while 5 males and 3 females were centenarians.

For purposes of comparison, the following are the death rates per 1,000 population for Canada, the Provinces, Great Britain and certain other countries of the world for the year 1937:

DEATH RATES			
Canada	10.2	Italy	14.0
Prince Edward Island	12.3	Poland	14.0
Nova Scotia	11.2	Scotland	13.9
New Brunswick	12.3	Austria	13.4
Quebec	11.3	Czecho Slovakia	13.3
Ontario	10.4	England and Wales	12.4
Manitoba	8.5	Sweden	12.0
Saskatchewan	7.3	Germany	11.7
ALBERTA	8.0	Switzerland	11.3
British Columbia	10.6	U.S.A.	11.2
Irish Free State	15.3	Norway	10.4
Northern Ireland	15.1	New Zealand	9.1
Hungary	14.1	Netherlands	8.8

Heart disease is still the most frequent cause of death, the rate being 109 per 100,000 population, compared with 103 for the previous year, the whole of the increase occurring in the older age groups. The cancer death rate decreased from 83 per 100,000 population for the previous year to 77 for the present year, there being 43 fewer deaths. Influenza replaced pneumonia for third place, the former accounting for 473 deaths and the latter for 464. Deaths from diseases of the arteries numbered 453 as against 427 in the previous year and 295 in 1933. This disease is rapidly increasing, having risen from a rate of 39 per 100,000 population in 1933 to 58 for the present year. Like heart trouble, it is a disease associated with declining years. The number of deaths from pulmonary tuberculosis was 266, against 295 for the previous year; the trend of this disease is still downwards, the decrease for the current year taking place amongst the Indian population as well as the white. Deaths from violence, excepting suicide, numbered 372, being less than the previous year by 47. The chief cause of this reduction was in the fewer number of deaths caused by motor car accidents and drowning. Motor car accidents dropped from 72 to 55 and drowning accidents from 68 to 53.

In the contagious disease class deaths from measles reached the abnormally high total of 123, being a rate of 16 per 100,000 population. This is a high record in the history of the Province; of the 123 deaths, 89 were whites and 34 were Indians. Other increases over the preceding years were: poliomyelitis from 4 to 13, scarlet fever from 23 to 24, and diphtheria from 9 to 10. There was one death from smallpox, the same as in the previous year. Decreases were recorded in the following diseases: typhoid fever from 20 to 6, and whooping cough from 73 to 49. Deaths from diseases of pregnancy and childbirth were 77, this being 14 less than in the preceding year, and constituting a rate of 4.9 per 1,000 live births.

The following table shows certain principal causes of death during the year. Both the actual number and the rate per 100,000 population of each is given, together with the figures for the four preceding years.

Causes of Death	1937		1936		1935		1934		1933	
	Number of Deaths	Rate per 100,000 Population	Number of Deaths	Rate per 100,000 Population	Number of Deaths	Rate per 100,000 Population	Number of Deaths	Rate per 100,000 Population	Number of Deaths	Rate per 100,000 Population
Diseases of the Heart	849	109	801	103	826	105	835	108	749	99

Scarlet Fever	24	3	23	3	8	1	5	1	5	1
Poliomyelitis	13	2	4	15	2	4	1	8	1

The foregoing list comprises 4,513 deaths and amounts to 72.1 of the total deaths for the year.

INFANT DEATHS

The deaths of children under one year of age numbered 994, as against 940 for the previous year. The rate per 1,000 births is 63 as compared with 60 for the year 1936, and is a rate of 5 more than the average of the preceding five years. This increase in the number of infant deaths is attributable to the prevalence of two diseases, measles and influenza. There were 29 more deaths from measles and 51 more from influenza than in the preceding year; whooping cough however, was responsible for 19 fewer deaths.

The following table gives, for the purposes of comparison, the infantile mortality rates per 1,000 births for Canada, the Provinces, Great Britain and certain other countries of the world for the year 1937:

INFANT MORTALITY RATES PER 1,000 BIRTHS

Canada	76	Hungary	135
Prince Edward Island	73	Czecho Slovakia	122
Nova Scotia	70	Italy	110
New Brunswick	101	Scotland	80
Quebec	100	Northern Ireland	77
Ontario	55	Irish Free State	72
Manitoba	64	Germany	64
Saskatchewan	66	England and Wales	57
ALBERTA	63	U.S.A.	54
British Columbia	56	Netherlands	38
Poland	136	New Zealand	31

Deaths by suicide numbered 101, being 14 more than in the previous year. Investigation reveals the fact that the chief cause of these suicides is financial difficulties.

Stillbirths numbered 355, being 21 less than the number for the previous year.

DIVISIONS OF ALBERTA FOR CENSUS AND VITAL STATISTICS PURPOSES

As the Province of Alberta is not divided into Counties, and the political divisions are not permanently fixed, it has been found advisable to use as smaller areas, the Dominion Census Divisions.

These Divisions are fixed, and as the population increases, may be subdivided without destroying their value for purposes of Vital Statistic comparison with preceding years.

The following table shows these Census areas divided into Municipalities, Local Improvement Districts, Cities, Towns and Villages with the 1936 and 1931 official Division population figures.
